

## Press Release

April 1<sup>st</sup>, 2022

Nippon Airport Radio Services Co., Ltd.

### TETRA Service Launched at Kansai International Airport

Nippon Airport Radio Services Co. Ltd., NAR, announced that they completed the system upgrade of the airport MCA system to TETRA at Kansai International Airport. The TETRA service was officially launched in the airport today.

NAR had signed an agreement of the transfer of Airport Radio Business from Kansai Airport Technical Service in 2020. After that, NAR has been installing TETRA system to replace the old MCA system in the airport. The switchover to TETRA service took place today and will enable high-quality voice communications in and around the airport, as well as intercommunication between Narita, Naha, Chubu, and Kansai airports. NAR has a plan to deploy TETRA as a wireless communications infrastructure to support the integrated operation of the three Kansai airports, including Osaka International Airport and Kobe Airport.

NAR has installed and provided the service of TETRA at Narita, Naha, and Chubu airports since 2016. The service has earned high marks for its reliability, quality, terminal robustness, and easiness of use. NAR will continue to provide stable operation of the service, and will offer terminals and additional services that meet the needs of airport operations, as well as the needs of the airport community.
